Firelite 9200uds datasheet

Smoke detectors may also not feel like a fire in another or floor of one. Smoke detectors can not be expected to provide adequate warning of incidence caused by the criminal incarnation, kids playing with fanfornos (especially in rooms), smoking in bed and violent explosions (Caused by exhausting genes, inappropriate storage of inflammable materials, etc.). Use not authorized from this document is strictly prohibited. The adhesion as follows will help in the installation without problems with long term reliability. Warning of different sources of power can be connected to the Incion Balm Alarm Control Panel. The control unit and the associated equipment can be damaged by removing and/or inserting interconnected cables, duty or interconnected cables while the unit is energized. Disconnect all sources of power before serving. Like all healthy state devices, this system can operate irregularly or may be damaged when subjected to lightning -induced transients. This compact intelligent address panel has an extensive list of powerful resources. e a ~ A e History file with a capacity of 1,000 events. a e e printer/PC interface EIA-232 (variable transmissive rate) on the main circuit board for use with an optional prn-6F printer. e eferences listed in UL Standard 864, 9th edit. The operation of this equipment in a residential area is probably causing interfering; In this case, the user should correct the interferealness of their own costs. This improvement allows a fully loaded panel with 198 devices to report an incident and enable notification circuits in less than 10 seconds. A e a A e Remote site or upload/download USB port, using PSOOLS. A e a A e Four (4) Style NAC circuits (4 B), which can be converted into four (4) Z -style circuits (class with optional ZNAC-92 converter. MicrosoftA® and Windows® are registered brands from Microsoft Corporation. Rate rate detectors may be subject to reduced sensitivity over time. While the o Rev 3 can be used with a SLC configured in CLIP mode (Classic Loop Interface Protocol), it can also operate in the latest Lite "Mode search mode for a more brave response time. CAUTION-REACTION TEST SYSTEM SYSTEMS CHANGES IN THE SOFTWARE: To ensure the proper operation of the system, this product must be tested according to NFPA 72 after any program of programming Or alteration in the specific site of the site. Audible devices, such as horns and bells, may have different tonal patterns and frequencies. Smoke particles can become "cold", stratify and not reach the upper ceiling or walls where the detectors are located. A life security system will not function without energy. A study by the Federal Agency of Emergency Management (a US government agency) indicated that smoke detectors may not leave so many 35% of all incidence. In rare cases, the sound of a warning device may cause temporary or permanent hearing loss. Although no system is completely immune to lightning transients and interfering, proper grounding will reduce susceptibility. Any warning device may fail to alert people with disabilities or those who have recently consumed drugs, Alcohol or medications. Smoke particles can be attracted to air returns before reaching the detector. It is essential to use only equipment listed to serve with your control panel. No tighten the screw terminals more than 9 in-lbs. - PANGE 2 303, 3rd floor, owner Industrial Estate Gabriel Road, Mahim (West), Mumbai: 400016, Tel Tel: +91 22 43488488 Fax: +91 22 43488477 Email: SPE@SPIPL With 303, 3rd floor, owner Estate Gabriel Road, Mahim (West), Mumbai: 400016, a ndia tel: +91 22 43488488 Fax: +91 22 43488477 and email: SPE@speippi.com Incidence Alarm and system of Of emergency limits, while a security system can reduce insurance rates, it is not a substitute for life and property insurance! A automatic automatic incem's System-normally composed of smoke detectors, heat detectors, manual loading ways, audible warning devices and a FACP Alarm Control Panel (FACP) with a notification capacity Remote-can provide an early warning of a developing fire. Note that: An emergency communication system may have priority on a fire alarm system in the event of a security emergency of life. An alarm system may not provide a timely or appropriate warning, or simply cannot work for vain reasons: Smoke detectors may not feel fire where the smoke is not It can reach detectors, as in chamination, on the walls, roofs or roofs or across the closed doors. Remove all electrical assemblies before any perforation, filing, widening or drilling of the case. All components, circuits, system operations or software functions known to be affected by a change must be 100% tested. Voice messaging systems must be designed to meet the intelligibility requirements, as defined by NFPA, local councils and authorities with jurisdiction (AHJ). In the mother, the requirements of NFPA 72 must be followed. A © 2014 by Honeywell International Inc. The back box can be installed, allowing the field of field to be pulled. In addition, to ensure that other operations are not affected inadvertently, at least 10% of the novice devices that are not directly affected by the change, at the time of 50 devices, must also be tested and the proper operation of the verified system. Heat detectors are designed to protect property, not life. Canadian Requirements This digital apparatus does not exceed class A boundaries for the Raádo Radialh emissions of digital devices set forth in the interfere regulations Rabia of the Canadian Communication Department. FACP operation and reliability depend on the proper installation. Follow the instructions in the installation manuals, operation and programming. Was tested and found to comply with the limits of class a Subpart B of part 15 of the FCC rules, designed to provide reasonable protection against this interferon when devices are operated in a commercial environment. A e a A e A e Verification selection of alarm of the system by the detector. A maintenance contract must be organized through the local manufacturer representative. CONSULT THE SERVICE DEPARTMENT TO TREATIC SECURITY If any problem is anticipated or found. e a A e e Detector Sensitivity Test Capacity (compatible with NFPA 72). The ms-9200uds Rev 3 removal chassis protects electronics during construction. It can not be used if the ancin-bus devices are used. IMPORTANT! Smoke detectors must be installed in the same room as the control panel and the rooms used by the system for the connection of the alarm transmission, communication, significance and signal /or energy. Smoke detectors, even when they work correctly, tannomials of detection. e a a A e An audible or silent person walking test with test log and impression. e a a A e Integral 80-Character LCD Display with Background Light. Although the alarm systems are designed to provide early warning against fire, they do not guarantee warning or protection against incidence. If the detectors are not so located, a developing fire may damage the alarm system, compromising its ability to report a fire. All rights reserved. These instructions must be followed to prevent damage to the control panel and associated equipment. Smoke detectors are projected to alarm in vain as a density of smoke. Use the stupid suppressor packaging to protect the unit -removed electrical sets. A e a A e recognizing, silence, redefinition and remote perforation by means of monitor duty addresses ACS. For additional protection The fault of the telephone line, is recommended backup transmission systems. If the energy fails, the system will operate from waiting batteries only for a specified time and only if the batteries were kept properly and regularly. The necessary telephone lines to transmit signs of installation alarm to a central monitoring may be out of service or temporarily disabled. A e a A e An- Bus for connection with the following optional diversions (it can not be used if used a e hydles ACS): Ann-80 (-W) LCD advertiser ANN-I/O DRIVER LED-ANN ANN -S/MOTHER OF PRINTING PG HIS PERMANCLE OF ANN-RLY ADMULARY OF ANN PLANTED BY ANNIDULAR OF ANNOUNCEMENT APENSER OF ROME ROME ROME ROME ROME /Term: e a Dy "" ACS Announcers: AT 32 Advertisers of SA e Rie ACM Legados (SA e Rie ACM-16AT or ACM-32). A second floor detector, for example, can not not Feeling a fire on the first floor or por. For this reason, each detector's Rise rate should be tested at least once a year by a qualified fire protection specialist. Studies have shown that certain people, even when they hear a sign of alarm of the Incidence, do not respond or understand the meaning of the sign, adversely fetaled by extreme tracks of temperature and moisture. e eference on board. The reaction test is required after any changes, addition or exclusion of system components or any changes, repair or adjustment to hardware or pean System of the system. To maintain the entire security system of life in excellent order of operation, it is necessary to maintain the manufacturer's recommendations and UL and NFPA standards. If these density are not created by a developing fire at the detectors site, the detectors will not enter the alarm. The detectors that are so -called detection. This system contains sensitive to static components. A e eferences PAS (Positive Alarm Sequence) and Driven Delay by Point (Compatible with NFPA 72). Maintenance must be scheduled monthly or as required by national and/or local performed only by installers of authorized professional security systems. e a A e Rago'gio/calendar in real time with auto control of the day's savings. Always assemble with an appropriate pulse high before handling any circuit so that the loads are removed from the body. Audible warning devices, such as bells, horns, strokes, speakers and display, may not alert people if these devices are located on the other side of closed or partially opened doors or are located on another floor of a prize. Litespeed patented technology searches are 10 devices at a time. Smoke particles can be removed from the detectors by air sockets, such as air conditioning openings. With Litespeed search, devices can be connected to twisted standard wires and no field at 10,000 pimonus distance. The Age or External Speaker is not recommended due to increased susceptibility to attitude of close ray. Failure can damage the circuits. Make sure the sizes of the proper wire sizes for all the beginning device loops and indicators. The amount of "smoke" present may be insufficient to alarm smoke detectors. e a a A e Identification of problems to point out. e a a Ours Alert of maintenance alert when the dust of the smoke detector is excessive. LitespeedTM, Lite-Connectm and Swiftm are trademarks; and Fire-Veliá® alarms is a trademark of Honeywell International Inc. This system meets the NFPA requirements for the operation c/32-120 ° F and with a relative humidity 2% rh (no condensation) A ± 3 a ° F). When possible, make all entries of the sides or rear cable. Combustion particles or "smoke" of a developing fire can not reach the detection of smoke detectors because: barriers such as closed doors or partially Walls, chaminã © s, attempts to be inhibited the flow of particles or smoke. This document can be found at <http://www.systemsensor.com/appguides/>. You are reading a free visualization, the pages 4 to 5 are not shown in this view. The Fire-Man MS-9200uds Rev 3 3 3 Version 5.0 Firmware is a combined FACP (Incidence Alarm Control Panel) and DACT (Digital Alarm Communicator/Transmitter), all on a circuit board. This system, however, does not guarantee protection against damage to the property or loss of lives resulting from a security or life security event. Currently, the number of Radioelectriques of Appareil N'Emet of BRUIT'S DEPASSENT LES APPLIABLE LIMITS a e « A e hycut auxiliaries La Class and prescribed DANS LE REGNTLEL SUR LI BROUILLAGE RADIOELAO © Trica Edictte stops MinisterSe des Communications du Canada. The most common cause of the malfunction of the life's security system is the inadequate maintenance. Since incems develop in different ways and generally unpredictable in their growth, no detector is necessarily the best and a particular type of detector can not provide a proper warning of a fire. The strokes can, under certain circumstances, cause seizures in people with conditions such as epilepsy. Therefore, it is recommended that this system and its periods be installed in an environment with a normal ambient temperature w/60-80° F. A e a A e e selection of water flow (no Silent) by monitor point. The system used in the system may not be technically compatible with the control panel. When construction is completed, electronics can be installed quickly with only two screws. The appropriate written records of all inspections must be maintained. The manufacturer recommends that the smoke and/or heat detectors are located in all protected installations, following the recommendations of the current edition of Normal 72 of the National Incarnation of the Association Protection Protection (NFPA 72), manufacturer's recommendations, state and local Counts and the recommendations contained in the guide for the proper use of system smoke detectors, which are available without No cost to the installation resellers. Heat detectors do not feel combustion particles and alarm only when the heat in their sensors increases at a predetermined rate or reaches a one Level. The surplus can damage the threads, resulting in reduced terminal contact and difficulty with the removal of the screw terminal. Detectors that have a photoelectrician detection of detection tend to detect incems in flames better than flames in flames, which are little visible smoke. Most devices can not tolerate more than 10% of I.R. fall from the tension of the specified device. Terminal Mode Advertisers: AT 32 LCD-80F remote advertisers. Language and instrument requirements must be clearly disclosed on any local displays. WARNING: This equipment generates, uses and can radiate radio frequency energy and, if not installed and used according to the Instruction Manual, may cause interferral in the communication of the rock. It is the responsibility of the owner to perform incidence exercises and other training exercises to make people aware of the signs of alarm of the incidence and instruments about the appropriate reaction to the alarm signs. Environments with large amounts of dust, dirt or high air speed require more frequent maintenance. This system, however, does not guarantee protection against damage to property or loss of lives resulting from a fire. Before making modifications, make sure they do not interfere with the battery, transformer or location of the printed circuit board. Disconnect the AC energy and batteries before removing or inserting circuit plates. e a a A e Automatic verification of the device type. No try to install, serve or operate this unit that the manuals are read and understood. An emergency communication system usually of a motor alarm system (as described above) and a life security system that may include a control unit Auto Noma (ACU), Local Operational Console (LOC), Voice Communication and other Vanios Intreperated communication methods can convey a mass notification message. (AT © 6.0 Total Amps of NAC energy when using optional XRM-24B. Optional. Sensor, wheel and people devices. Devices.
